Imdb top rated telugu movies 2018

Keep up with the latest daily buzz with the BuzzFeed Daily newsletter! Netflix has proven that it's possible to get incredibly grainy when decomposing different types of movies. But before the streaming service offered such classic search faves as mind-bending, stoners, race-against-time, and nightmare vacations, IMDB used more traditional terms—think animation, horror, and Western-class flicks on its site. Martin Kruusimägi has always been a film fan: To paraphrase a character from my latest obsession, Boardwalk Empire, "for a little while they make us forget who we are and where we are. So the Estonian-born, Great Great-based creative behind Young Ant Studio set out to illustrate IMDB's top 50, by genre. Drama (Is) King represents the synthesis of ideas and development for Kruusimägi. He developed a general structure for a previous project involving a university client who documented members and their research disciplines—not exactly swashbuckling adventure film or sci-fi epic material, but the form was enough to inspire this new incarnation. He went to the official IMDB list, which is compiled by user voices (view it here, then discuss what they got terribly, inexcusably wrong in the comments) to keep things consistent. While a fan, my cinematic knowledge would fall short if I were to categorize them myself, says Co.Design. There would be one blue ball on the right. When he started, he had no idea what the split would be, so it took some analysis to analyze through the results. Due to the large amount of data, he experimented with several different angles and layers to balance the proportions and get a semicint sense of balance. The hardest part, in fact, was perfecting the small icons that represent each of the titles, despite the fact that he actually saw most of the items. Not all movie posters were familiar to me, so when I made stylized versions of them I was met with surprise, he says. Surprises along with outbursts of anger at the number of characters who decided to put posters in the

Lord of the Rings. Damn you, Aragorn! The film-loving public, however, is nothing if not ficchy. Despite their consistent, undying devotion to the Godfather and Shawshank redemption, there's always some movement when it tastes ebb and flow: In the six months between when Kruusimägi began and ended, inventory shifted. I had to go back to the redesign breakdown and each line in the piece, he says. The compendium is a bit like a box of chocolate in this way—you never know what you're going to have. (h/t PopSci) It was supposed to be a great flight. Here's why: The British Airways entertainment system came in a few minutes earlier than normal, and it's going to stay on for a little longer. This meant that Col Needham, founder and chief executive of IMDb, the world's largest film database, had the chance to watch five films on flight from London to Seattle, rather than its usual four. It was January. Needham was on his way to the Sundance Film Festival. As the plane looped across the Atlantic, he watched the Tour de Force, a French cycling comedy (Needham is learning French) and gave him 8 out of 10 on his IMDb ratings page. Mid-ocean, Needham followed up on the animated food adventure Cloudy with Chance of Meatballs 2 and awarded it a 7th Season. Then came Austenland (6) and last year's musical Proclaimers, Sunshine on Leith (7). Somewhere over the Midwest, Needham sensed that time was against him, so he went to Dirt, playing James McAvoy as an alcoholic cop, because he had seen it before, and it had a short running time of 97 minutes. Just as they said, 'We're closing the entertainment system,' he recalled, his voice full of joy at the end of the credits being rolling. Needham gave Filth 7.1 learned all this recently in the kitchen of the Needham house, which is on the northern edge of Bristol. We stood at the back door in the morning of torrential rain. Gap-toothed, shorn-headed and quickly giggling, Needham was leaning against the counter, the thumb of his iPhone. He was on his IMDb page, which on that day listed 8,505 films he had seen and included - roughly one for every 48 hours that he had been alive since January 26 1967. I don't need to remember anything, he's got a good time. And then his voice changed: Remember the necklace. Needham said it in a different tone because it's a quote from Vertigo, which is his favorite movie. We looked at the weather. It was too wet to take his picture. When the photographer left to come back the next day, Needham cried, 'See you next Wednesday,' as they say in the John Landis movies! Which is a reference to American comedy director John Landis, who has always included phrases in his films as a tribute to Stanley Kubrick, because that's a quote from 2001: A Space Odyssey. Technology and film: these two things were kind of on this collision course Needham apologized almost as soon as I arrived. We were in his home theater and he just made a line from Armageddon – I don't want you to miss the thing – about my tape recorder. I'm sorry, he said. It's all about me being a movie. And it is, to an inseparable extent. Needham's life, obsession and IMDb, the machine he has built on the manifesto, are so deeply cast that they can no longer be pulled apart. In the 1990s, Needham was a shy, Hitchcock-obsessed computer programmer who uploaded his personal movie database to an internet bulletin board. They were simple records, kept on a succession of early computers, of every movie he'd seen since the age of 13. It became the Internet Movie Database, or IMDb, which is now one of the world's most popular websites. About 190 million people visit each month pore over the careers of movie stars and get lost in its welter of information about the entertainment industry. Only in 2013, IMDb added that titles of film and television show – equivalent to 17 editions of Halliwell, the old film encyclopedia. For a quarter of a century, Needham's teenage catalog has become hollywood's hard drive, and the movie-goer's answer to the eternal question: Is this the guy who was in that thing? Needham with his wife Karen and actor Kevin Bacon at the Sundance Film Festival, 2009 More Than That, IMDb is also a symbol of the changing value of data. What began as trinkets could soon be an integral part of the process of making movies itself. IMDb was bought by Amazon in 1998 (the price was never disclosed) right at the beginning of the internet giant's efforts to understand the world's consumer habits and sell us what we want. Now IMDb and Amazon are part of changing Hollywood, trying to take advantage of our clicks, our comments, our ratings - even our ideas - to create another billion-dollar franchise, another Breaking Bad.And Needham was there, database guy, at every unlikely step. He wriggles with pleasure when he talks about it. He walked his first red carpet, in Cannes, in 2008, and regularly appears on the industry's power lists. When we met, he was just about to enter the hectic weeks of awards season: baftas; and then the Oscars, where he's been a guest for the last two years. He went bashful when I asked if it made him a bona fide Hollywood player: Well, I think. . Later that day. We sat at rickechy tables in imdb offices in Bristol. There was a poster from the crime thriller Narrow Edge on the wall. In fairness, it didn't feel very glamorous. But Needham isn't. Until 2011, he led IMDb out of the house. The website has between 100 and 200 employees, split between Bristol and offices in Seattle and Los Angeles. He keeps getting up at 6:00, seven days a week. On weekends, it is in order to watch movies before his wife wakes up. I've already watched a movie of Karen being out of bed, easily. He grew up in Denton, a former suburb of Manchester. As a boy, Needham spent a lot of time with his grandparents, who ran newsagents, and in the late 1970s, the alchemy of computers and movies began to stir in his brain. He read Personal Computer World magazine, and built his first machine out of a kit, the Science of Cambridge MK14, at the age of 12. He saw Star Wars and the Colossus: Project Forbin, which is about a computer that takes over the operation of the US defence system. He took alien and watched it 14 nights in a row. He wrote information about every movie he saw. Technology and film, he explained, these two things were kind of on this collision course. With Karen at the Vanity Fair Oscar Party, the 2014 IMDb grew out of a collective effort, led by Needham, to organize a film of trivia that was published early on the internet. At the time, he had just moved to Bristol, where he worked for Hewlett-Packard in artificial intelligence, where he studied computer science in Leeds. October 17, 1990 a way to upload your personal movie database – a complete record of every movie seen since January 1980 – to an online message board. Get it for a bite: it was the 'Rec.arts.movies Film Database Script Package.' And for the next six years, it was Needham's Saturday morning. He was the unofficial leader of a band of about 20 film and computing brothers, managing lists on a discussion system called Usenet, before taking his twins to the park. It was our hobby, he said. I was a film enthusiast who ran this international voluntary organization of other film and television people. In 1993, the first IMDb website was launched at a spare capacity on the University of Cardiff's web server. Two years later, with traffic and data doubling every two weeks, the group decided to close the company and sell advertising. Needham was the largest, but not the majority shareholder. IMDb.com at the Oscars the following year. He left Hewlett-Packard and was the first database and for a time just an employee. Next year will be 25 years since Needham first shared his database. And like other huge collaborative projects on the web like Wikipedia, IMDb preserves the nerdy bacteria that I got it going in the first place. Hundreds of thousands of people - from actors polishing their credits to film-makers listing their crew to last-day Col Needhams - post information on IMDb. Everything is filtered using algorithms that score the contributor's previous reliability before they are checked by an IMDb employee. For each account we know exactly what you submitted before, Needham said. We can see you're really, really reliable on 1940s Westerns, but not so great at 1960s French film. We can see you are really, really reliable on 1940s Westerns, but not so great at the 1960s French film The Result now works for some as a Hollywood memory. And that means IMDb has a lot of power. Not necessarily in a very active or intrusion sense, but in a more utility sense, such as Los Angeles' electricity or water supply. I remember life before IMDb, Richard Hicks, casting director of Gravity and Zero Dark Thirty told me. It was a Kafkaesque fitting set of cabinets and Rolodex cards and scrawled notes on the backs of pictures and biographies. When the site went down for a couple of hours for maintenance recently, Hicks just stopped working. ... IMDb stopped being simply a fan site in 2002 when imdb pro launched. The premium service costs \$124.95 a year and offers industry experts contact information, the ability to post their CVs and summary about 12,000 projects in production so they can see who is doing what. (As with other financial information such as site earnings, IMDb won't say how many paying subscribers it has.) In 2008, IMDb acquired Withoutabox.com, a major submission service for independent film festivals, meaning it now provides critical infrastructure for this part of the film business as well. it acts as a marketplace for festival organizers and film-makers, allowing independents to submit the same film to, say, 20 festivals at a time, rather than laboriously delivering 20 separate submissions. With actress Olivia Wilde at the Toronto International Film Festival, the 2013 Power and Reach means, perhaps inevitably, that IMDb is facing controversy. Last year, it won a court case led by an actress named Junie Hoang, who claimed that by disclosing her actual date of birth in 1971 (as opposed to her given date of birth, in 1978), the post cost her \$1m in lost earnings. Hoang accused IMDb of using the data it provided when setting up her account to determine her age, an alleged breach of contract. She appealed against the outcome of the court case. Needham would not comment on the case, but he rejected the idea that by giving some information to the public IMDb had the power to harm people's careers. Don't delete the exact details, he told me. We provide everyone with as much information as possible so that we can make an informed decision. This extraordinary amount of information is also what highlights more interesting questions about the future of IMDb. As part of Amazon, the site, in needham phrases, has access to all its clever personalization algorithms - meaning that IMDb suggests more movies and movie stars for you to look at when browsing. The data is cut in both directions. After nearly 25 years, and with the best part of 200 million people crawling through their site every month, IMDb has a unique map of how we, watching audiences, interact with what we see on our screens. Who do we look like? What we're commenting on. Genres we adore. Digital ingredients, if you can read the symptoms on the right, hit. There are already signs of convergence between IMDb and the Hollywood machine, between the Needham catalogue and the industry it adores. In the US, you can click on the movie on IMDb and start watching it via Amazon Instant Video (last month it was available to Amazon Prime customers in the UK). And in 2010, Amazon began producing movies and television itself. The emphasis is on letting the crowd - manifested as clicks, comments, scripts, sitcom situations - submit ideas and then determine which projects get green-lit or not. So far 18,000 film ideas and 4,000 TV designs have been sent, and Amazon Studios released its second season of Five TV Pilots last month. Roy Price, the studio's director, described the project to me as part of a broader technology-enabled cultural shift to make film-making more democratic. IMDb as a platform can be a part of it, he said. It's enough to take some movie lovers pause. The idea of making creative decisions through a crowd, even if it's the largest and digitally integrated crowd ever assembled, can be anathema. That's why Needham's personality, his unguarded obsession, still matters. When you collaborate with IMDb, you feel fandom, Keri Putnam, director of Sundance Film he told me. Col doesn't feel like someone who came from the technology field to try and change Hollywood. Anything, but. Until recently, when he wanted to be vague, Needham told people that he ran a website. Nowadays, he confided with quiet joy, saying that he works in the film business. A few days after we met, I saw him in the thick of it, standing in a constellation of movie stars at a Bafta awards dinner at the Grosvenor House Hotel, in Mayfair. Needham and his wife were in evening dresses, wearing gold IMDb badges. Bradley Cooper was nearby, taking selfies; Dame Helen Mirren kissed congratulations to Alfonso Cuarón, director of Gravity; Cate Blanchett walked past like a boat under a tarp. I asked Needham if it was possible to stand in this room and not just see everyone's IMDb profile. Sometimes, he said. Then he broke off. There's Bruce Dern, he said, pointing to the white-haired Nebraska star, around our table. He was in the last scene in Family Plot, the last film ever directed by Alfred Hitchcock. Needham shrugged happily. Sometimes, though, I struggle. Sometimes I don't know everyone. He paused. That's why we have an app. —————IMDb in numbers190 million: visitors every month350,000: film and TV titles added in 20131998: IMDb bought Amazon2002: launched IMDb Pro2008: obtained by Withoutabox.comif you want to comment on this article, please post below or email magazineletters@ft.com magazineletters@ft.com
